

Preparing Your Equipment for Winter

Winter operations have unique demands on your equipment. They need special attention to key items before committing them to a tough production season.

Six critical items lead our winter checklist:

Fuel

Ensure there's a winter blend in the tank to head off cold-weather gelling.

Crankcase Filters

To ensure no ice clogging, consider replacing early if they are coming due.

Batteries

Use a battery tester to check the performance of your current battery.

Undercarriage

Inspect the undercarriage before after each use.

Check the Cab

Ensure that the cab heaters are working to maximize operator comfort.

Hydraulics

Replace all hoses with cracks or weak spots.

CALL YOUR PRODUCT SUPPORT SALES REPRESENTATIVE FOR FURTHER DETAILS AND MORE COLD-WEATHER TIPS.

Your PSSR will schedule your servicing and work with you to stock your shelves with the solutions you need for winter.
