

PREPARING YOUR EQUIPMENT FOR WINTER

Winter forestry operations have unique demands on your equipment. They need special attention to key items before committing them to a tough production season.

Six critical items lead our winter checklist:

OILS

Ensure a winter weight of engine oil like 0w-40 or 5w-40; and use an all-season hydraulic oil

COOLANT

Make sure it's good to a minimum of -40°C to prevent serious engine block damage

CRANKCASE FILTERS

To ensure no ice clogging, consider replacing early if they are coming due

FUEL

Ensure there's a winter blend in the tank to head off cold-weather gelling

WASH

Thoroughly clean your machine well before freezing temperatures arrive

PRODUCTS

Consider using Komatsu Genuine Products to be sure warranty is unaffected

Call your Product Support Sales Representative for further details and more cold-weather tips. Your PSSR will schedule your servicing and work with you to stock your shelves with the solutions you need for winter.
